A. Getting Started

A-1 Introduction

Online Distance Learning is an online system designed for the internet community for the purpose of providing a learning center to all people who are interested in online education.

The system was developed using Hypertext Markup Language, Active Server Pages and JavaScript. The platform for which it has been designed is Windows 2000 Server.

A-2 About this manual

This manual is a guide for the server and client configuration, the system installation described for the Administrator and also a user guide for tutors and students.

The screens captured from the system and the installation procedure provide a basic guide both to the Administrator and the rest of the users.

The manual is divided into 5 sections. These are:

- 1. Server And Client Configuration**

The server and the client configuration that are needed are shown.

- 2. Administrator Section**

The options available to the administrator are explained.

- 3. All users Section**

Describes the options available to unregistered users.

- 4. Students Section**

Describes the system options that the registered students have.

- 5. Tutors Section**

Describes the system options available tot tutors.
