## **ACKNOWLEDGEMENTS**

I would like to express my sincere thanks to my project supervisor Mr. C Chrysafiades for his guidance and assistance during the whole process of this project.

Also I would like to thank everyone else who helped in any other way such as providing necessary information specifications and data or suggesting methods for betters presentation of the project.

## **SUMMARY**

The purpose of the electrical installation project is the design of electrical services in a multistory building which must be carried out accordance with responsibility in order to provide safety to the people.

The electrical design of the building is carried out according to IEE Regulation 16<sup>th</sup> edition.

The design of the electrical services of the building is explained in details in the book. The book has been divided into different chapters. The contents of the book and of each chapter are given at the beginning. All the electrical design calculations are including in architectural drawing which provided. At the end of the book there are appendices. In each appendix there are tables and manufactures data used in the design, for each equipment.

## **INTRODUCTION**

Design of electrical services of a multi – storey building as the title of this project

The objectives of this project are:

- ✓ To design the complete electrical installation of a multi – storey building which include the following:
  1. Lighting
  2. Power
  3. Design of storage heaters installation
- ✓ To provide all necessary drawing, schedule of material and costing including labour.

## **TERMS AND CONDITIONS**

1. Architectural drawing will be provided.
2. Three phase supply 415 Volts, 50 Hz, and TT earthing system must be used.
3. The IEE regulation 16<sup>th</sup> and all related local EAC conditions of supply should be considered.
4. Levels of illuminations must in according with the CIBS code.
5. All switches are mounted 1.5m above the floor and sockets are mounted 0.4m above the floor. Distribution boards are mounted 1.7m above the floors.
6. External earth fault loop impedance is chosen to be  $Z_e = 1\Omega$
