## **Summary**

This project provides a Ladder diagram for a dust separator BETH pulse bag filter in order to increase flexibility on the subordinate ladder diagram.

The first five chapters give extended information's about the programmable logic controllers, the main instruction set used, the internal components and also the communication used for the PLC's

Chapter six is referring to the procedure used for the installation of the PLC.

The operation of the BETH pulse filter and factors that affect the ladder diagram like the sequence of the valves are described on chapter seven.

Finally the analysis of the ladder diagram is concluded in chapter eight whereas the ALLEN BRADLEY SLC 5/03 is used with associate RS LOGIX 500 industrial software for programming the Allen Bradley PLC's.

The conclusion and comment for the project is in the last chapter, chapter 9

So study the valuable information about this specific application and discover the PLC on your own, it's worth of trying!
