ABSTRACT:

THE DETERMINATION OF THE RESIDUAL SHEAR
STRENGTH OF CLAY SOILS

by: Antoniou Niki (3C1)

Georghiadou Elena (3C1)

The objectives of the project are:

1. To determine the shear strength of remoulded clay soils.
2. To determine the residual shear strength of undisturbed clay soils.
3. To explain what is the sensitivity of a soil.
4. To explain where the residual shear strength of a soil is used and why.
