June 1990

1.1 Introduction

This program is made to replace the Manual Card System used for inventorizing Equipments in Records at large workshops, stores or other services.

Its very fast and has many facilities to help the operator dealing with Equipment Records and Spare Parts.

1.2 System Requirements

The program is written in GW-BASIC language, which requires MS-DOS version 3.2 or later.

This program can be used with any IBM compatible Computer, XT or AT.

1.3 Preliminaries

The files used by the program will be located on the Hard Disk of your computer. Be sure to make a working copy of the files:

GWBASIC.   EXE

PROJECT.   BAS

IRES.   BAT

on a diskette before you proceed.

1.4 Organization of this Manual

The Equipment Inventory System Manual is divided into three chapters:

Chapter 1, " Welcome to Equipment Inventory System ", describes this Manual.

Chapter 2,   " Getting Started with IRES ", is an elementary guideline on how to begin with this program.

Chapter 3,   " Using the   program ", describes the program, showing the format of the output displays.
