INTRODUCTION

For educational package CyHCAIS

The Computer Aided Learning system for the History of Cyprus is designed to provide electronical information and in a more interesting manner so that foreign visitors to the island, foreign students, education establishments, as well as expatriate Greeks and Greek Cypriots will have the opportunity to learn about our own history.

To best achieve this goal undoubtedly a personal computer is needed. In this package a graphical representation of the prehistoric era is accomplished thus incrementing a persons interest and knowledge. This package will be introduced in all schools with foreign students and it will be used as a teaching tool by the teacher.

With the appropriate updating of the system we will be able to exhibit it to other countries, through travel agencies for example, giving the opportunity to people who have never been at this island to learn about our precious history and make them love and want to visit our island.
