CONTENTS

ACKNOWLEDGEMENTS	I
SUMMARY	II
INTRODUCTION	1
CHAPTER 1 MP and Stepper Motor Interfacing	2
1.0 Introduction	3
1.1 Description of the aluminium cutting machine	3
1.1.1 Solution 1-Using a PC	5
1.1.2 Solution 2-Using a microcontroller board	6
1.2 Conclusions	7
CHAPTER 2 The 8085 microprocessor circuit	8
2.0 Introduction	9
2.1 The Microprocessor Unit	9
2.1.1 Circuit Description	10
2.1.2 8085 Microprocessor	11
2.1.3 8155 I/O Programmable Device	16
2.1.4 Explanation of circuit	20
2.1.5 Frequency and Power Requirements	23
2.1.6 The Reset Circuit	24

2.1.7 Despiking Capacitors	25
2.2 Stepper Motors	26
2.3 Stepping Motor Driver	28
2.4 Keyboard and Switches	30
2.4.1 Switches	30
2.4.2 Keyboard	31
2.5 LED's	32
CHAPTER 3 Programming of the system	33
3.0 Introduction	34
3.1 Programming Steps	34
3.2 Program Description	35
3.3.1 Addressing 8155	35
3.3.2 Creating the Control Word	36
3.4 Assembly Program	37
3.4.1 Main Program	37
3.4.2 Interrupt Program	40
3.4.3 Light Subroutine	40
3.5 Explanation of Program	41
3.5.1 Characteristics	41
3.5.2 Assembly Explanation	41
3.5.3 Creating Control Numbers	43
3.5.4 Duration	43

CHAPTER 4	Construction	44
4.0	Introduction	45
4.1	Procedure Followed	45
CHAPTER 5	Testing	46
5.0	Introduction	47
5.1	Static Test	47
5.2	Microcontroller Testing	47
CHAPTER 6	Possible Improvements and Conclusions	49
6.0	Possible Improvements of the project	50
6.1	Conclusions	50

Appendix B	PCB's	55
Appendix C	Components Data Sheets	59

ACKNOWLEDGEMENTS

I would like to thank my supervisor , Mr. Marios Kassinopoulos for his human response and his valuable assistance during the three years of my studies at the Higher Technical Institute.

Also, I would like to thank Christos and Chrystalla Demetriadou for their help during these years.

Special thanks I would like to give to Mr. Angelos Iona for his valuable assistance.

Finally, I would like to thank my parents for their human assistance and economical support. This project is dedicated to my brothers Constantinos and Marios.

SUMMARY

ANDROS CHOULIS

DEVELOPMENT OF A STEPPER MOTOR MICROCONTROLLER

The main objective of this project is to study the theory of a microcontroller system and construct a system which would control two stepper motors . This system will be applied in an industry machine.

The work was performed and completed successfully. All the software and hardware has been done and also some additional work completes the purpose of the project.

INTRODUCTION

In nowadays , electronics are introduced in a large part of our life. Electronics are also used widely in industry ,for controlling the operation of mechanical machines .For this purpose ,computers and other microcontroller systems are used. This technology has a lot of advantages .The main advantage is that we have the flexibility to control the action of the system just by changing some special settings or the whole software. So ,by this we avoid in large part the change of the whole mechanical section ,if this is attainable .

In our project we deal with such applications ,where a microcontroller system controls the operation of two stepper motors .The construction of this board has no actual final target to control two stepper motors but can be control with the help of some other devices ,a lot of operations that done manually before. This it can be applied in many fields of industry .To be more exactly ,this controller it will applied to a cutting machine.

Our project is divided in three main parts :

- i)The hardware construction of the system
- ii)The software design
- iii)Testing and troubleshooting

Any information regarding the parts of this project mentioned above are found in the following chapters.
