Project Supervisor: M Poullaides
Lecturer in Civil
Engineering, HTI

Type of Project : Group

ABSTRACT

The objectives of this project are to give an account on the design and practical considerations regarding hot and cold weather concreting, and to investigate experimentally how the properties of fresh and hardened concrete are affected by the rise or fall of the mixing water temperature.

TABLE OF CONTENTS

	<u>Page</u>
ACKNOWLEDGEMENTS	I
ABSTRACT	II
CONTENTS	III
INTRODUCTION	IV
<u>CHAPTER 1 - HOT WEATHER CONCRETING</u>	
1.1 Introduction	1
1.2 The effects of different weather conditions	2
1.3 The properties of concrete affected by hot weather	5
1.4 The temperature of freshly mixed concrete	8
1.5 Materials	
1.5.1 Water	9
1.5.2 Aggregates	13
1.5.3 Cement	14
1.6 Hot weather precautions in concrete production - cooling of materials - placement procedures	15
1.7 Batching, Mixing and Transporting	18
1.8 Curing and Protection Requirements	19
1.9 Special testing considerations	21
<u>CHAPTER 2 - COLD WEATHER CONCRETING</u>	
2.1 Introduction	22
2.2 The effects of frost on fresh concrete	23
2.3 The temperature of freshly placed concrete	26
2.4 Preparations for cold weather concreting	35
2.5 Heating of materials	
2.5.1 Mixing water	37
2.5.2 Aggregates	38
2.5.3 Cement	39
2.6 Cold weather precautions in concrete production	40
2.7 Batching and Mixing of concrete	42
2.8 Placing	43
2.9 Accelerated hardening	44
2.10 Curing requirements	46
2.11 Protection requirements	
2.11.1 Formwork	48
2.11.2 Enclosures	50
2.11.3 Removal of formwork	51
HOT AND COLD WEATHER CONCRETING: SUMMARY	52
<u>CHAPTER 3 - EXPERIMENTAL INVESTIGATION</u>	
3.1 Making and curing the test cubes in the laboratory	53
3.2 Testing the Compressive Strength	55
3.3 Results: Tabulated and Graphical Presentation	61
3.4 Comments and Conclusions	67
CONSULTED REFERENCE	70
