HIGHER TECHNICAL INSTITUTE | PROJECT NO 2623

SUMMARY

The original proposal issued by the Computer Studies Department of the Higher Technical Institute, in partial fulfillment of the requirements for the award of the Diploma in Computer Studies, involved the development of a system for the Temporary Importation of Motor Vehicles and other goods in Cyprus. After some discussions with the project supervisor, it has been decided that we should contact the Customs and Excise Department for gathering any necessary information for the completeness of our project.

The main purpose of this project is to provide the employees of the Temporary Importation Department with a completely integrated system to automate form entries and reports - an easy, understandable system that will help them with the performance of their work.
