SUMMARY

Project Title: Multimedia Dyslexic Program

Author: Michael Tochnitis

The original proposal issued by the Computer Studies Department of the Higher Technical Institute, in part fulfillment of the requirements of the awards of the Diploma in Computer Studies, deals with the development of a system that will support/help dyslexia specialists/teachers in their job.

For the fulfillment of this system some factors are to be considered such as:

- I. This project is for students of the primary school that's why the system has multimedia characteristics such as fancy colors, cartoons, and other childish stuff.
- II. The project it will consider to fulfill the requirements of the Special Need Department of the Ministry of Education only.
- III. I will be under supervision of Mr. Pantelis Makris one of the three Inspectors and I will extract, as many information are necessary for this project.

Nevertheless, since this project is a multimedia system, it does not comply with many steps of the structured system analysis and design method (SSADM) approach. Therefore not all of SSADM's phases will be followed. Many of them will be altered or even passed over, as necessary, in order to provide the best possible documentation for this project
