HIGHER TECHNICAL INSTITUTE	PROJECT NO. 3312
----------------------------------	-------------------------

SUMMARY:

This project's goal is the development of a software platform, which will support and help any Internet user to be informed about the cultural heritage of the island of Cyprus. This digital representation will create a "virtual tour" through the island's history including the time-period from the Pre-Neolithic Period until the end of the Roman Period.

Considering that the users of this multimedia presentation will be people interested for the general history of the island for these periods, the information will not cover the history of Cyprus in detail.

For the development of this project it was decided to use Macromedia's Director 8.5 tool, which is one of the most powerful and wide used authoring tools for movie and Internet publishing.
