SUMMARY

The project deals with the development of an information system, and specifically with the DEVELOPMENT OF CIVIL DEFENCE NICOSIA REGIONAL UNIT.

In order to provide the reader, with the necessary understanding, regarding the technique used in analyzing and developing an informational system, a brief description of this process is given at an initial stage.

An extensive description of each of the major steps that comprise this process is given in separate chapters and is documented through the use of different forms, data flows diagrams and narratives.

The objectives of the project are:

- To develop a Civil Defence System to meet the Nicosia Regional Unit Requirements.
- To provide an on-line facility for the personal data of the Civil Defence Serviceman/Servicewoman and for assisting Civil Defence daily work.
- To provide all necessary reports on screen or printer according to the user's request.
- To provide a variety of inquiries.
