SYNOPSIS

Construction Management is a wide range of activities assisting the modern construction industry to become more effective and reach its objectives it is a powerful tool for increasing productivity, minimizing the available resources and advancing the goals of any contracting company.

The purpose of this project is to present the fundamental parts of construction management and how management is applicable in Cyprus.

The project is divided into three parts. The first part is dealing with the fundamental parts of construction management analyzing each one and how they affect the management. The second part is dealing with construction management in Cyprus. The contractors are classified in three categories, small, medium and large. Each category is examined and contractors were asked how they apply management. Also the opinions of contractors in what ways construction management can be improved. The third part is the conclusions and the comparing of the management's theory and application.

2.6 The local authorities	7
3.0 Principles of management	7
3.1 The nature of management	7
3.2 Scientific Method	8
3.3 The processes of management	9
4.0 Network planning	18
4.1 The construction of networks	19

4.2	Network calculations	21
5.0	Site layout and organization	27
6.0	Plant and equipment	33
6.1	Selection of plant	33
6.2	Purchasing	37
6.3	Operation of equipment	39
6.4	Maintenance and service of the plant	40
6.5	Plant costs	41
6.6	Recording Techniques	47
7.0	Cost Control	54
7.1	The purpose of cost control	55
7.2	Systems in current use	56
7.3	Allocation of cost control	64
7.4	Choosing a cost control system	65
8.0	Material	66
9.0	How the contracting firms in Cyprus applied management	74
9.1	Management as applied by small contracting firms	74
9.2	Management as applied by large contracting firms	77
10.0	Conclusions	79
