HIGHER TECHNICAL INSTITUTE	PROJECT NO. 2930
----------------------------------	---------------------

SUMMARY

The purpose of my project was to prepare a Bill of Quantities not with the traditional manual way but by using computers.

Primarily the taking off was carried out manually with the traditional way, with reference to SMM7 and then the Abstracting and Billing was carried out with the aid of a computer program called BQ MICRO and which was provided by the M.D.A. Company (Chartered Quantity Surveyors and Construction Cost Consultants).

The task of carrying out the project with the aid of a computer program enabled me to get acquainted with more than one ways of preparing Bills of Quantities apart from the traditional way, including the method where a digitiser is used.
