HIGHER TECHNICAL INSTITUTE	PROJECT NO. 1614
----------------------------------	---------------------

ABSTRACT

This project has two objectives; to make a detailed study of the various types of the floors and roofs structures that may be used for residential purposes and to compare the most suitable methods of their construction.

The project consists of two Parts.

The Part A covers the function requirements of the various types of the floors.

The Part B describes the constructional methods of various types of roofs in connection with their suitability, stability and economical function.
