Summary

Development and design of a transistor audio amplifier

By

Frixos Frixou

This project deals with the construction of audio amplifiers using transistors. At first it deals with the various types of amplifiers. Then their most important characteristics were stated. Then several amplifier circuits were examined and their operation was explained. At the end an audio amplifier was design and constructed and several observations were made.

TABLE OF CONTENTS

Acknowledgements	1
Objectives	2
Summary	3
Introduction	4
Chapter 1 – Types and characteristics of amplifiers	5
1.1 General types of audio amplifiers	6
1.1.1 Class A amplifiers	6
1.1.2 Class B amplifiers	6
1.1.3 Class C amplifiers	6
1.1.4 Class AB amplifiers	7
1.2 Important features to be taken into account	8
1.2.1 Distortion	8
1.2.2 Noise	9
1.2.3 Signal to noise ratio	9
1.2.4 Input and output impedance	9
1.2.5 Sensitivity	9
1.2.6 Slew rate	9
1.2.7 Quiescent current	9
1.2.8 Output power	10
1.2.9 Frequency response	10

Chapter 2 – Various amplifier circuits	11
2.1 Investigation of various types of amplifiers	12
2.1.1 Small speaker applications	12
2.1.2 Computer audio booster	15
2.1.3 Audio amplifier for small speaker applications	16
2.1.4 Crystal radio (and other purpose) audio amplifier	18
2.1.5 Transistor amplifier	19
2.1.6 2 Watt audio amplifier	23
2.1.7 60 Watt into 8ohms audio amplifier	25
2.1.8 55 Watt power amplifier	29
2.1.9 15 Watt amplifier	30
Chapter 3 – Construction of the amplifier – Results	32
3.1.1 Selection of the amplifier and power supply circuits	33
3.1.2 Technical specifications	35
3.2.1 Circuit operation	36
3.2.2 The amplifier's sections	38
3.2.3 Circuit construction	41
3.2.4 Power supply	42
3.2.5 Testing	42
3.2.6 Graphs	42
Conclusions	44
Appendix A – Transistor 2N3055	
Appendix B – Transistor 2N5320	
Appendix C – Transistor 2N5322	
Appendix D – Diode BA157	
Appendix E – Bridge KBU6G	
Appendix F – Regulator L7824CV	
Appendix G – Regulator L7924CT
