SUMMARY

This project is related with the development of an Information System that could be used in the medical industry and more specific in a Paediatrician office.

The manual system has many problems which the new system intends to overcome. Therefore this project has to do with the design and implementation of a software for Paediatricians, that should allow the user to run the business on a day to day basis and produce historical and statistical reports.
The system will include :
      (a) Basic details for all patients
      (b) History of Visits
      (c) Inquiry by name, patient No
      (d) General screen as well as printer
          reports about information concerning
          the patients
      (e) Some accounting
