

# DESIGN OF A SAVONIUS TYPE AEROGENERATOR

Project Report Submitted by :

*STELIOS ZARVOS*

in part satisfaction of the award  
of Diploma of Technician Engineer  
in Mechanical Engineering of the  
Higher Technical Institute, CYPRUS

Project Supervisor :            Mr. M. Pattichis  
   B.Sc. Eng.  
   M.Sc. Eng.  
   Lecturer in Mechanical  
   Engineering H.T.I.

Type of project :                Individual

JUNE, 1991

## ABSTRACT

This project is a complete design of a Savonius type of aerogenerator. The use of wind as power source is not new but the important point is our technoeconomically competitive society and its feasibility.

Main topics which are critically examined are:

- Aerodynamic design
- Structural design
- Selection of the main parts

Acknowledgements

Abstract

Introduction

History of wind energy utilization

CHAPTER 1 :	BASIC CONCEPTS OF WIND POWER .....	1
1.1	Energy - Power relation .....	1
1.2	Available Wind Power .....	1
1.3	Wind Power captured by the rotor .....	3
1.4	Tip-speed ratio .....	6
1.5	Wind-turbine efficiency .....	8
1.6	Overall efficiency .....	9
CHAPTER 2 :	CLASSIFICATION OF WIND POWER MACHINES ..	12
2.1.1	Horizontal axis wind turbines .....	12
2.1.2	Vertical axis wind turbines .....	12
2.2.1	Small wind turbines .....	14
2.2.2	Medium wind turbines .....	15
2.2.3	Large wind turbines .....	15
2.3.1	Slow running wind turbines .....	15
2.3.2	Fast running wind turbines .....	15
CHAPTER 3 :	SURFACE WINDS IN CYPRUS .....	19
3.1	Local winds in Cyprus .....	19
3.1.1	Land-and Sea - Breezes .....	19
3.1.2	Anabatic and Katabatic Winds .....	20
3.2	Mainly Windward and mainly Leeward regions of Cyprus .....	21
3.3	Surface winds over the various regions of Cyprus .....	22
3.3.1	Winds in Region 1 .....	22
3.3.2	Winds in Region 2 .....	24
3.3.3	Winds in Region 3 .....	25
3.3.4	Winds in Region 4 .....	25

CHAPTER 4	:	AERODYNAMIC DESIGN .....	27
4.1.1		Calculation of the Savonius rotor area .	27
4.1.2		Calculation of the rotational speed of the rotor .....	28
4.1.3		Input, rotor and output power as a function of the wind speed .....	30
4.2.1		Rotor geometry .....	32
4.2.2		Aspect ratio .....	37
4.2.3		Rotor Solidity .....	38
4.3		Reynolds number .....	38
4.4		Aerodynamic design assumptions .....	39
CHAPTER 5	:	STRUCTURAL DESIGN .....	40
5.1.1		Total Force on the rotor .....	40
5.1.2		Force direction .....	41
5.2		Torque on the Savonius rotor .....	41
5.3		Bending moment-Shear force diagrams for the rotor shaft .....	43
5.4		Combined Bending and Twisting of the rotor shaft .....	46
5.5		Design of the rotor - shaft bond .....	49
5.5.1		Design of the weld .....	50
5.5.1.1		Primary shear .....	50
5.5.1.2		Secondary shear .....	51
5.5.1.3		Electrode selection .....	52
5.5.2		Design of the bolts .....	52
5.5.2.1		Primary force .....	54
5.5.2.2.		Secondary force .....	54
5.5.2.3		Bolt selection .....	55
5.6		Structural design assumptions .....	57
5.7		Rotor Construction .....	58
5.7.1		Rotor parts list .....	58
5.7.2		Procedure for the assembly of the rotor.	60
5.8		Supporting structure .....	62
5.8.1		Forces on the supporting structure .....	62
5.8.2		Calculation of the legs length .....	63
5.8.3		Foundation of the tower .....	67
5.8.4		Mass of concrete blocks .....	67

CHAPTER 6	:	ALTERNATOR .....	70
6.1.1.1		Rotating armature alternator .....	70
6.1.1.2		Rotating - field alternators .....	70
6.1.2.1		Single - phase alternators .....	72
6.1.2.2		Three phase alternators .....	72
6.2		Power measurement in three phase alternators .....	74
6.3		Frequency of the generated voltage .....	75
6.4		Principles of alternator voltage control .....	75
6.5		Field excitation .....	77
6.6		Rectifiers .....	77
6.7		Alternator selection .....	78
CHAPTER 7	:	ROTOR BEARINGS .....	82
7.1		Bearings selection .....	82
7.2		Description of the bearings selected ...	82
7.3.1		Deep groove ball bearing .....	83
7.3.2		Angular contact ball bearing .....	83
7.4		Bearing life .....	83
CHAPTER 8	:	TRANSMISSION SYSTEM .....	88
8.1		Power transmission calculations .....	88
8.1.1		Pulley speeds .....	89
8.1.2		Power of the pulley shafts .....	89
8.1.3		Torques on pulleys .....	90
8.2		Check whether the torque is enough to drive the alternator .....	90
8.3		Belts selection .....	91
8.3.1		Selection of belt type and belt number(s) for 1st step-up .....	91
8.3.2		Drive tension for MAXSTAR WEDGE V-belts drive .....	104
CHAPTER 9	:	STORAGE BATTERIES .....	106
9.1		Methods of connecting batteries .....	106
9.2		Ratings of batteries .....	107
9.3		Alternator - Battery connection .....	108
9.4		Battery selection .....	108

CHAPTER 10	:	MAINTENANCE .....	113
10.1		Rotor bearings maintenance .....	113
10.2		Maintenance of the alternator parts ...	113
10.3		Maintenance of Maxstar Wedge	
		V-belts .....	116

Comments .....	118
