INTRODUCTION

As far as we go, the cost of leaving a normal life is getting more and more expensive. So people are enforced to work a lot of time and more over to do more than one job in order to cover their needs.

This makes people stressed and they don't have enough free time to spend for basic needs such as to spend time with their families or to go for shopping to the supermarket.

But now with the help of the internet some things which require a lot of time, now can be done faster than before. The project's target is to implement a website where people will do their grocery shopping from their homes safely, fast and moreover very easy.

The online supermarket will be very user-friendly so users will access it and find their goods easy, fast and when they finish their orders, they will schedule the Delivery Time and Date, pay safety with their internet card and finally they will have goods delivered to their door.

ABOUT THE MANUAL

The manual explains through images how to install the program that will be used and includes all components needed, Wamp5.

Also there is fully detailed description of all the procedures and functions of the system, including the Back-End menu of the Administrator.
