Project Report Submitted by

MAVRONICOLAS ANASTASIOS

in part satisfaction of the award of

Diploma of Technical Engineer in

Mechanical Engineering

of the

HIGHER TECHNICAL INSTITUTE - Cyprus

Project Supervisor: P. Tramountanellis
Lecturer in
Mechanical Engineering H.T.I.

External Assessor:

Type of project: Individual

|----------------------------------|-------------------------|

INTRODUCTION.

One of the main components of a central heating or hot water supply system, is the Hot Water Boiler. In fact it is the most costly component although is very simple in construction; it is just like two empty barrels one inside the other with water filling the space between them. The water is heated by burning a fuel, usually oil, in the inner barrel.

Its operation is also simple. However, the design of such a simple equipment is extremely difficult. This is extraordinary but it is true.

Boilers are classified as pressurised vessels and are treated as such. Their design and manufacture is governed by Internationally recognised standards from which the manufacturer can not decline.

Boilers design entails specific knowledges in the field of Thermodynamics. Apart from the basic formula of heat transfer, equations and factors derived from experience are greatly involved.

In this project, an approach is made from the design point of view, although the title of the project states "Design Modifications". This is because it is of my belief that "Design Modifications" is a step further from actual design. In doing modifications, one must pass from the design stage, and he must be expert in finding ways of improvement or changes in design. Therefore most of the effort was given in the design of the boiler rather than any other stage.

Having in mind that this project is not a kind of text book, it has been avoided overwriting of excess theories, and great effort has been laid in the actual design process of the boiler.

List of contents

| | <u>Page</u> |
|---|--|
| <u>INTRODUCTION</u> | |
| <u>CHAPTER 1: BACKGROUND THEORIES</u> | |
| 1. | THE MODES OF HEAT TRANSFER (Conduction, Radiation, Convection, Conductance and overall heat transfer coefficient, general equation of heat transfer) 1 - 2 |
| 1.2 | HEAT TRANSFER IN HOT WATER BOILERS 3 - 4 |
| 1.2.1 | The furnace 5 - 6 |
| 1.2.2 | Heat transferred in a boiler furnace 7 - 8 |
| 1.2.3 | Heat absorbed in a boiler furnace 9 -13 |
| 1.3 | The tubes 14 |
| 1.3.1 | Heat transfer in tubes 15 |
| 1.3.2 | Dimensional analysis 15 |
| 1.3.3 | Determination of tube length through dimensional analysis 16-18 |
| 1.4 | COMBUSTION BASIC PRINCIPLES 19 |
| 1.4.1 | Factors affecting good combustion 19 |
| 1.4.2 | Combustion calculations 19-21 |
| 1.4.3 | Adiabatic flame temperature 22-24 |
| 1.5 | BOILER DESIGN CRITERIA 25-26 |
| 1.6 | THE BS 855:1976 27 |
| <u>CHAPTER 2:</u> | |
| 2. | BOILER CONFIGURATIONS AND DESIGN CALCULATIONS |
| 2.1 | BOILER CONFIGURATIONS 28 |
| 2.2 | DESIGN CALCULATIONS 29 |
| 2.2.1 | Heat transfer in a boiler furnace 29 |
| 2.2.2 | Calculating the net heat released by combustion (eq. 8) 29-34 |
| 2.2.3 | Calculating the heat absorbed by the water in a furnace 35-38 |
| 2.3 | Solution of eq. 12 38 |
| 2.4 | Calculating the furnace absorption rate 38 |
| 2.5 | Calculating the total furnace absor- ption rate |

| | | |
|--|---|----------|
| 2.6 | Calculating furnace efficiency | 49 |
| 2.7 | Design cases | 49 |
| 2.8 | Summary of design cases | 51 |
| 2.9 | Calculation of tubes length | 52-65 |
| <u>CHAPTER 3: COMMENTS ON DESIGN CASE 1</u> | | |
| 3.1 | Heat transfer in boiler furnace | 66-68 |
| 3.2 | Heat transfer in boiler tubes | 68-75 |
| 3.3 | Selection of a design case | 76-78 |
| <u>CHAPTER 4: DESIGN CONSTRAINS SPECIFIED BY BS 855: 1976</u> | | |
| 4.1 | Design pressures and flow temperatures. | 79 |
| 4.2 | Materials | 79 |
| 4.3 | Design stresses | 80 |
| 4.4 | Thickness of shell | 81 |
| 4.5 | Flat plate margine | 81-82 |
| 4.6 | Minimum thickness of flat plate | 83 |
| 4.7 | Minimum thickness of tubes | 83 |
| 4.8 | Minimum thickness of cylindrical shells | 84 |
| 4.9 | Manufacture and Workmanship | 84 |
| <u>CHAPTER 5: Assumptions</u> | | 85 |
| <u>CHAPTER 6: CONCLUSSIONS AND COMMENTS ON THE OVERALL WORK DONE</u> | | 86 |
| <u>LIST OF APPENDIXES</u> | | |
| A1. | Project's particulars | 87 |
| A2. | Diesel oil characteristics | 88 |
| A3. | | |
| A4. | Specific heat of gases | 89 |
| A5. | Specific heat of liquids | 90 |
| A6. | Combustion constants | 91 |
| A7. | Usual amount of excess air to fuel burning equipment | 92 |
| A8. 1 | Average specific heat of fuel V_S temperature graph | 93 |
| A8.2 | Sensible heat of gases V_S Flue gas temperature graph | (folded) |
| A9. | Concentration factor $K V_S$ Firing density | 94 |
| A10. | Normal total emissivity values | 95-98 |
| A11. | Beam lengths for gas radiation | 99 |
| A12.1 | BASIC PROGRAM calculating C_p and h values | 100 |

| | | |
|-------|---|---------|
| A12.2 | BASIC PROGRAM calculating heat absorbtion rate and furnace exit temperatures | folded |
| A12.3 | BASIC PROGRAM calculating tube length | folded |
| A13. | Furnace absorbtion rate V_S furnace exit temperature graph | folded |
| A14. | Viscosity, thermal conductivity, specific heat of gases V_S temperature graph | 101 |
| A15. | Thermophysical properties of gases at atmospheric pressure. | 102 |
| A16. | Dimensionless groups | 103 |
| A17. | Effect of temperature upon Thermal conductivity of metals and alloys. | 103 |
| A18. | Conversion of units table. | 104-106 |

| | |
