1. INTRODUCTION

1.1INTRODUCTION TO THE SYSTEM

I. INTERNET BANKING SYSTEM

Internet Banking System is a Web Based application with all the security features (encryption of passwords, Ids etc.) designed for Web Bank Organization.

The system will be residing on a Web server and should be able to be accessed by multiple users.

The system will provide financial institutions with a proven way to provide their customers with an electronic link to their financial accounts.

Internet Banking System will has the following benefits:

Convenient:

Internet Banking System puts you in control. Now you can securely access your accounts and conduct your banking via the Internet 24 hours a day, 7 days a week.

• Secure:

With Internet Banking System your transactions and enquiries are protected with the latest and strongest 128-bit encryption available.

Internet Banking System uses several layers of technology to ensure that confidentiality of your transactions:

- Browser encryption
- Username and Password
- Network Security and Monitoring

• Easy to Use:

With Internet Banking System it is easy to:

- Access your accounts
- View account information, including balances, statements, summaries and account histories
- Transfer money between your accounts
- Make transactions with different banks
- Pay bills like water, electric, phone etc.

• Bank from your Browser:

Internet Banking System is a browser-based service. You do not have to buy or download any software if you are using a compatible browser.
