Introduction

This project was proposed by me, Panayiotis Agapiou. This project is an online multimedia system for one of the section of Mathematics, Statistics. It is one of the final projects of the Academic year 2006-2007 in order student graduate (**APPENDIX A**).

The aim of this project is to develop an online system, using Macromedia Dreamweaver 8 and MySQL. The main object of this project is to satisfy the Internet users that they would like to learn Statistics. Moreover a contact option will be available that will includes e-mail, comments or questions, and phone number of the people that work in order to implement this project.

All the requirements of the system and all the necessary information about Statistics are exist from the 2nd year of education in H.T.I when I was studying Quantative Methods II with Mrs. V.Kroni and from Internet tutorials.

The goal is to satisfy all the project requirements and develop a high-level Web site that will be easy to use in a user-friendly environment.

By the end of the development of this project I will gain a lot by using Macromedia Dreamweaver 8, mySQL and general the online e-learning systems.
