HIGHER TECHNICAL INSTITUTE	PROJECT NO. 2751
----------------------------------	----------------------------

Computer Aided Learning System about Cyprus Monasteries.

Developed by Zannetou Tasos, 3Cs, 1997

Summary

The original idea was born by my supervisor, Mrs Pagona Katsouri, lecturer for the Computer Studies in General Studies Department of the Higher Technical Institute for the partial fulfilment of the award of the Diploma in Computer Studies.

This project can be considered as multimedia educational and informational package, primarily developed for learning and testing knowledge about selected Cyprus Monasteries. It is made up of three main parts:

- a. Learning module
- b. Testing module
- c. Database module

The first module aim at introducing users to all relevant material about the selected Cypriot monasteries in an interesting way. The material to be taught to the student using both graphics and multimedia, such as text, pictures, video and sound. Also in the learning module there is a map of Cyprus indicating the location of each monastery.

The second module tests the knowledge acquired by the students using tests selected for each monastery to be solved, using true-false questions. The student has to decide if the given statement is true or false and as soon as

he/she exists the test a performance report is generated, by clicking on a certain button. The report informs the user of the achieved score as well as the number of correct answers given. Moreover, the system provides the student with a solution option, where the solutions to the questions of a test are presented.

The third module converts the system into an information system. The system will keep track of users, users' activities (covered material and attempted tests) and performance. Furthermore, the database module will keep dates of accessing the system for the various activities.

In addition, the system provides reports in form of table and graphical charts of user performance and also statistical information about users' activities. All of the above will be made available to see by the teacher. A student can have access only on that information that referred to himself/herself.

In addition, the system provides an on-line help facility, on-line enquiries, security measures such as passwords and user modes (teacher's mode and student's mode) as well as other utilities such as user password maintenance, backup and restore of the database files.

This system has been developed on an IBM compatible computer using a programming language/environment (ToolBook), that provides graphics / multimedia facilities under Windows.

Finally, a User Manual has been developed in a separate binding, to assist the users while operating the system.

It is believed that with the help of this package, students will be urged and filled

with enthusiasm and willingness as far as learning more about Cyprus monasteries and teachers will have a useful and powerful teaching tool to help them with their work.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS

SUMMARY	1
---------	---

INTRODUCTION	4
--------------	---

1. INVESTIGATION PHASE

1.1 Introduction	5
------------------	---

1.2 Initial Investigation Activity

1.2.1 Activity Description	6
----------------------------	---

1.2.2 Project Request Evaluation	6
----------------------------------	---

1.2.3 Objectives of the new system	6
------------------------------------	---

1.2.4 Information of the existing system	7
--	---

1.2.4.1 Existing system procedures	7
------------------------------------	---

1.2.4.2 Problems of the ongoing procedures	8
--	---

1.2.5 Rough, preliminary estimation of Cost and of projected Benefits	9
--	---

1.2.6 Recommended Solution	10
----------------------------	----

1.3 Feasibility Study

1.3.1 Activity Description	11
----------------------------	----

1.3.2 Feasibility Study Considerations

1.3.2.1 Financial Feasibility	11
-------------------------------	----

1.3.2.2. Operational Feasibility	12
----------------------------------	----

1.3.2.3 Technical Feasibility	13
-------------------------------	----

1.3.2.4 Schedule Feasibility	14
------------------------------	----

1.3.2.5 Human Factors Feasibility	14
-----------------------------------	----

1.3.3 Conclusion	15
------------------	----

2. ANALYSIS AND GENERAL DESIGN PHASE

2.1 Introduction	16
2.2 Existing System Review	
2.2.1 Introduction	16
2.2.2 Organization	16
2.2.3 Ongoing Procedures	17
2.2.4 Existing Data and Printed Material	17
2.2.5 Current System Inputs	18
2.2.6 Current System Outputs	19
2.3 New System Requirements	
2.3.1 Introduction	20
2.3.2 User Specification Document	
2.3.2.1 Overview Narrative	20
2.3.2.2 System Function	21
2.3.2.3 Processing	21
2.3.2.4 Data Dictionary	22
2.3.2.5 Inputs	22
2.3.2.6 Outputs	23
2.3.2.7 User Interface with the system	25
2.3.3 Conclusion	25
2.4 New System Design	
2.4.1 Introduction	26
2.4.2 New System Design Specification	27
2.4.2.1 Overview Narrative	27
2.4.2.2 Inputs to the system	27
2.4.2.3 Outputs to the user	28
2.4.2.4 Data Files	28

2.4.2.5 Performance Criteria (Response Times)	29
2.4.2.6 Security and Control Measures	29
2.5 Implementation and Installation Planning	
2.5.1 Introduction	30
2.5.2. Preliminary Implementation and Test Plan	30
2.5.3 Preliminary System Test Plan	31
2.5.4 Training of the users	31
2.5.5 Preliminary Installation Plan	32
2.5.6 Conclusion	32

3. DETAILED DESIGN AND IMPLEMENTATION PHASE

3.1 Introduction	33
3.2 Technical Design	
3.2.1 Introduction	33
3.2.2 Detailed Design Specification Document	
3.2.2.1 Human-Machine Interface Design	34
3.2.2.2 Application Software Design	34
3.2.2.3 Backup requirements and Recovery procedures	35
3.2.2.4 Logging Requirements	36
3.3 Test Specification and Planning	
3.3.1 Introduction	36
3.3.2 Levels of testing	
3.3.2.1 Unit Testing	37
3.3.2.2 Integration Testing	37
3.3.2.3 Function Testing	38
3.3.2.4 System Testing	38
3.3.2.5 Acceptance Testing	38
3.4 Programming and Testing	39

3.5 User Training	39
3.6 System Test	40

4. INSTALLATION PHASE

4.1 Introduction	42
4.2 File Conversion	42
4.3 System Installation	42
