Introduction

Welcome to the Astronomy Multimedia system. Astronomy Multimedia system was developed as a Higher Technical Institute project during the year 1996. It is an astronomy computer assisted learning package, providing an intermediate level of education as far as the subject of Astronomy is concerned. It has a Graphical User Interface (GUI), with mouse support and simple screens containing fancy images that will make working with it a real pleasure.

About This Manual

The User Manual is the only documentation provided with the Astronomy Multimedia system. It contains information on how to install, learn and use its graphical interface.

Next is a discussion of how to install the system on your computer. The rest of the chapters deal with the following topics :

- “Cruising” in the Astronomy Multimedia graphical user interface.
- How to run the system.

- How to use the Main Chart.
- How to view information about the system built.
- How to use the Sun option.
- How to view information about the planets.
- How to view the Moon option.
- How to use the General option.
