Antreas Kkolos

EXTERNAL ASSESOR:

Feidias Eleftheriades

SUMMARY

BUILDING AND CIVIL ENGINEERING CONTRACTS USED IN CYPRUS

BY ELIZA PANAYIOTOY

The project conditions as drafted by my supervisor Mr Kkolos were to visit local offices of Quantity Surveyors, Civil and Architectural offices and discuss with them the contracts they use.

During my project period, I have visited offices of Quantity Surveyor, Civil Engineers and Architects as required. I found it important to see and study their own way of thinking about and handling building and civil engineering contracts as well.

In the following report I give a brief analysis of what I found out from my visits to these offices. I also make a comparison of the actual contracts as they are used in Cyprus with the standard forms as have been prepared and used abroad.
