## CHAPTER 1

### 1.1 Introduction

The "Front End Software System For the HTI Information System" has been developed to meet the immediate computer needs of HTI as they will arise when the credit point educational system is implemented at HTI. The system is based on an American style credit point educational system and is mainly being involved with students registration procedures, marks preparation procedures, students personal information maintenance, maintenance of all related files needed to support the system, backup and recovery procedures, password control, on line facility e.t.c.

The system has been developed in a user friendly environment using FoxPro for windows. The user can easily understand and manipulate the system. As the user goes through the system he will realize how convenient and easy is to perform the various operations offered by the system.

In the pages that follow the various parts of the system are being described in detail so that the user can go through this manual, for assistance at any point of the system.
