HIGHER TECHNICAL INSTITUTE	PROJECT NO 2213
----------------------------------	--------------------

## ACKNOWLEDGEMENT

We hereby wish to express our sincere thanks to those who have given us, all the necessary guidance and help throughout our three years of studies at the Higher Technical Institute.

Furthermore, we would like to thank all those who have by any means contributed in the preparation and completion of this project and in particular the following:

Mr. D. Andreou, lecturer at the H.T.I and our project supervisor for his helpful advice and guidance.

Mr. N. Hadjigeorgiou for his contribution and assistance in carrying out the experiments. Mrs. M. Ioannou for printing our project.

## DEDICATION

We would like to dedicate our project to our families.

G. Yerolemou  
Ch. Panayi

## OBJECTIVES OF THE PROJECT:

1. To establish the water absorption of bone dry aggregates to bring them to S.S.D. condition.
2. To prepare concrete and test for workability for various water contents.
3. To compare the results with the data given in the "design of normal mixes" of BRE.

## TERMS AND CONDITIONS

1. Aggregates to be used on those normally found in the building trade in Cyprus.

## CONTENTS

### Pages

### CHAPTER 1.      **Aggregates**

1.1	Preview	4
1.2	Significance	3-5
1.3	Classification and nomenclature	5
1.4	Natural mineral aggregates	5
1.5	Lightweight aggregates	6
1.6	Heavyweight aggregates	7
1.7	Blast furnace slag aggregates	7-8
1.8	Aggregates from recycled concrete and municipal wastes	8
1.9	Production of aggregates	8-9
1.10	Aggregate characteristics and their significance	9-13
1.11	Shape and surface texture	14
1.12	Deleterious substances	14-14

### CHAPTER 2      The properties of plastic on concrete

2.1	Introduction	16
2.2	Measuring workability	17
2.3	The slump test	17-18
2.4	General comments of Measuring workability	19-20
2.5	Factors affecting workability	20-24
2.6	Workability	24-25

### CHAPTER 3      Mix design for high Strength

3.1	Introduction	30-34
3.2	Some important points	26-27
3.2	Mix design	27-28
3.3	Lightweight aggregates	28-29

CHAPTER 4      Experiment

4.1	Slump Test	.....	30-34
4.2	Absorption	.....	35-37
4.3	Sieving	.....	38-24
4.4	Mixes	.....	44
4.5	Mix design	.....	45-54
4.6	Evaluation of moisture		
	Content of coarse aggregate	.....	55
4.7	Results from slump test	.....	56-57
4.8	Conclusions	.....	58-59
