----------------------------------	--------------------

ACKNOWLEDGEMENTS

I would like to express my deepest appreciation to those who in any way contributed to the completion of this project.

I fell obliged to thank my project supervisor Dr. C. Papaleontiou for his encouraging help and valuable assistance on the completion of this project.

Further I would also like to express my deepest thanks to Mr Stelio Zervo for his valuable guidance and assistance. Also I would like to extend my thanks to all the personnel of the Coastal Unit, of the Public Works Department of the Ministry of Communications and Works who willingly helped me.

SUMMARY

Cyprus is an island whose economy is based mainly on the tourist industry. Tourists attracted mainly by the beautiful sandy beaches of the island. However a considerable length of the Cyprus coastline is suffer from erosion and other coastal problems. Therefore an attempt to save the beaches of Cyprus is begun and project called Coastal Zone Management for Cyprus is being carried out by the Coastal Unit of the Ministry of Communications and Works. The main objective of this project is to find the best methods to protect at the major possible degree the free coastline of the Cyprus.

This report is referred to the methods and procedures followed during the collection of the various data by the Coastal Unit. This data will be used for the aims of the project Coastal Zone Management for Cyprus.
