

DESIGN OF AN AIR CONDITIONING

SYSTEM FOR A RESTAURANT

Project report submitted by :

VASSILIOU GEORGE

TO MY FAMILY

In part satisfaction of the award of diploma of Technician Engineer in Mechanical Engineering of the Higher Technical Institute, Cyprus.

Project supervisor : Mr. Theodoros Symeou
Lecturer in Mechanical
Engineering, H.T.I

Type of project : Individual

May 1990

HIGHER TECHNICAL INSTITUTE	PROJECT NO. 1696
----------------------------------	---------------------

SUMMARY

The purpose of this project is to design the air conditioning system for a restaurant in Nicosia.

The method of thermal load calculation was based on a computer program provided by CARRIER.

Architectural drawings for the building and its design conditions were provided while ambient conditions were already stored in the computer programme.

The project can be divided into three parts.

The first part deals with the heating and cooling load calculation and gives all the necessary formulae and assumptions used.

The second part deals with the system selection, with the selection of appropriate machinery as well as with equipment, duct and pipe sizing.

Finally the third part provides technical specifications for the equipment and materials used, an estimated cost analysis for the system employed and a preventive maintenance scheme for the major equipment used.

Energy conservation was considered to be of major importance in the design of the system.

The system layout and its major components including piping, ducting and controls are presented on a complete set of detailed mechanical drawings.

The project is divided into 10 chapters.

CONTENTS

ACKNOWLEDGEMENTS	
SUMMARY	
INTRODUCTION	
<u>PART A</u>	
<u>CHAPTER 1</u> <u>U-VALUES ESTIMATION</u>	
1.1 Introduction	1
1.2 Values of Thermal Conductivity for various Building Materials	4
1.3 Calculation of U-Values	5
1.4 Summary of U-Values	26
<u>CHAPTER 2</u> <u>COOLING AND HEATING LOAD</u> <u>ESTIMATION</u>	
2.1 Introductory	28
2.2 Heating Load	29
2.3 Cooling Load	31
2.4 Heating and Cooling Load estimation methods as recommended by Carrier	34
2.5 Explanation of the computer forms	36
2.6 Computer Forms	45
2.7 Heating and Cooling Load Calculation Output	60
2.8 Summary of Heating-Cooling Loads	83
<u>PART B</u>	
<u>CHAPTER 3</u> <u>SYSTEM SELECTION</u>	
3.1 Air Conditioning Systems	84
3.2 System Selection	87
<u>CHAPTER 4</u> <u>PIPING SYSTEM DESIGN</u>	
4.1 Types of circuits	90
4.2 Sizing the pipework	92

	<u>Page</u>
<u>CHAPTER 5</u>	<u>AIR DUCT SYSTEM DESIGN</u>
5.1	Introductory 94
5.2	Velocity Method 95
5.3	Equal - Friction method 95
5.4	Static regain method 95
5.5	Supply Duct System 96
5.6	Return Duct 97

<u>CHAPTER 6</u>	<u>SELECTION OF THE APPROPRIATE MACHINERY AND EQUIPMENT</u>
6.1	Water Chiller 99
6.2	Boiler - Burner 100
6.3	Boiler Flue 101
6.4	Fuel Tank and Fuel Consumption 102
6.5	Expansion Tank 103
6.6	Radiators 105
6.7	Fan Coil Units 107
6.8	Air Handling Unit 108
6.9	Extract Units 111
6.10	Supply and Return Air Outlets 111
6.11	Fans 113
6.12	Pumps 117

<u>CHAPTER 7</u>	<u>KITCHEN VENTILATION DESIGN</u>
7.1	Introduction 122
7.2	Kitchen Hood - Filters - Fan 122
7.3	Kitchen Hood and Duct design 123
7.4	Filter Selection for Kitchen hood 123
7.5	Selection of extract fan for kitchen 124

PART C

<u>CHAPTER 8</u>	<u>TECHNICAL SPECIFICATIONS OF MATERIALS AND EQUIPMENT</u>
8.1	Air Cooled Water Chiller 126
8.2	Boiler 127
8.3	Burner 128
8.4	Boiler Flue 129

	<u>Page</u>	
8.5	Oil Storage Tank	129
8.6	Air Handling Unit	129
8.7	Fan Coil Units	130
8.8	Chilled/Heating Water Pumps	131
8.9	Air Outlets	131
8.10	Fans	131
8.11	Kitchen Hood - Grease Filters	132
8.12	Ductwork	132
8.13	Piping	133
8.14	Insulation	134
8.15	Anti - Vibration Mountings	135
8.16	Fittings	136

CHAPTER 9 COST ANALYSIS 138

CHAPTER 10 MAINTENANCE

10.1	Introduction	141
10.2	Chiller	141
10.3	Burner	142
10.4	Boiler	143
10.5	Fans	143
10.6	Pumps	144
10.7	Coils	144
10.8	Filters	145
10.9	Pipes	145
10.10	Ducts	146
