## Introduction

Cyprus Computer Society is a non-profit organization and constitutes the professional Body of Computer Science and Information Technology Professionals. CCS responsibilities include the promotion of Computer Science and Information Technology in Cyprus the information and education of the public on IT related issues. Among CCS's responsibilities is the organization of several events that vary from it-related seminars to the organization of competitions and examination conductions. The conduction of such events raises a high need for an effective and at the same time low-costing communication among the Society's members. They need a way to communicate with the participants for each event and also be able to receive some feedback from those participants. The aim of this project is to satisfy the society's messaging needs. Those needs have been stated and described by Society's representatives and were declared as the project's requirements.
