### ACKNOWLEDGEMENTS

I would like to express my gratitude to Mr. Costas Santanas, and to Maria as well for dedicating their valuable time to help me solve any of my questions and thus familiarize myself with what is called a cad package.

I would also like to thank my project supervisor Mr. Klitos Anastasiades for his assistance and guidance.

## SUMMARY

The scope of the project work was the production of drawings with the aid of a cad package, to discuss in general the applicability of computers in the production of drawings and to get familiar with a cad package.

Preassumption for this aim is the proper use of a computer. One first has to get familiarized with the computer. Once he do that drawing with the cad is a matter of practice and experience.

For the production of my drawings autocad relased 10 was used.

As I said there is no need for previous experience in computers. Some basic knowledge needed are easy to learn (formation of diskete, copy command, restore, save e.t.c). Basics one must know about the programm is how to set some limits on the drawing, how to use the appropriate scale and how to create and edit the drawing. Also the use of colour in layer control, how to dimension and some other functions of the programm offered with much alternatives that requires some experience by the user.

There are many ways to draw a drawing. What a professional will do is to find the easiest one necessary to save time.

Once you've learned to communicate with autocad on the basis described in the previous lines nothing can stand on your way of producing good drawings.

## CONTENTS

	Page No.
Summary	1
Introduction	2
1. Equipment required	4-8
1.1. A computer and keyboard	
1.2 A monitor	
1.3 A mouse	
1.4 A digitizer	
1.5 A printer	
1.6 A plotter	
2. The Main menu	9
3. The standard Menus	10
3.1 Screen menu	
3.2 Pull down menus	
3.3 Dialogue boxes	
3.4 The icon menu	
4. Autocad's most common command's and operations	17
5. Conclusions	29
