Acknowledgments

We would like to express our appreciation and thanks to our project supervisor, Mrs. Eliza Loizou, for being so understanding and for her valuable guidance throughout the development and implementation of this project.

We would also like to thank all the people who helped us by giving us important advices.

Finally, we would like to thank all people who really gave us so much in these three years of studying in Higher Technical Institute.

Thank you, Elena Gavriel & Elena Mansi.

Introduction

This project concerns the implementation of a system that will consist of two parts. The system purpose is to introduce a new approach to the customers of a flower shop in order to be served. The system will offer a new way of shopping from a flower shop through the Internet as well as database management from the manager's point of view.

The two parts of the system are briefly explained below:

1. Internet Site Aspect

The users will be able to enter through the Internet into the system, register themselves and do their shopping as if they were actually at a flower shop. The users will also be provided with information of planting and taking care of different flowers.

2. Back Office Aspect

The manager of the flower shop will have to maintain the database of the system, which will include customer, maintenance as well as other facilities like prices on product purchases, product availability.

The system is considered to be very interesting, since the Internet has recently intruded our lives and was established as the strongest publishing media in the I.T (Information Technology). Thus, the development of such a system requires great effort, but also knowledge and experience will be gained through that effort.
