DATA ACQUISITION SYSTEM FOR THE IBM PC  
by Philip Chr. Psiloinis

SUMMARY

This project is intended to lay the foundations for the development of a data acquisition system on the IBM PC. The user of this program, is to be able to utilise the analog-to-digital converter of a commercially available multifunction card. This is the PCL711 from Advantech company ltd.

The basic thing this project is supposed to do, is to demonstrate how the computer can process analog data, that is sampled and converted into digital format. The whole concept is to demonstrate how computers can help bring out analog data which the user cannot visualise, out into a medium which the user can see.

Taking an industry standard Pascal compiler, Turbo Pascal, it was made possible to write the engine driving the card. Then by building around this engine, it was made possible to write a small routine to get up to 1024 samples and save them into a file. ✓

Taking advantage of the compilers powerful interrupt handling routines, it was procedures and functions were added that allowed the computer process data while in the background a timered mode allowed the computer to sample and store from the card at user defined intervals.

Then, routines for plotting the data on the screen and printer were added. These routines featured screen grab facilities that allowed the saving of the screen into a file and possibility of restoring it back on the screen.

Fourier transforms are powerful tools for processing waveforms, so fourier analysis routines were added to enable the user to analyse the sampled data. The analysis includes real and complex analysis which can be viewed together with the plot of the sampled data.

Finally, a data conversion routine which allows the user to enter raw data in a file and process them as if they were normally sampled.

This project provides the basic software, the building block on which a powerful data acquisition system can be built. It achieves this much and is user friendly thanks to the Turbo Vision environment of the Compiler.

What is more important though is that the programming experience it provided me, made me more confident in writing software to drive experimental hardware that is interfaced on the IBM PC. It gave me a thorough understanding on how to manipulate experimental data, an understanding of the problems that may arise in similar environments and made me able to understand better the acquisition systems that arer used even in everyday household machinery such as compact disks and similar digital systems that come out each day.

## TABLE OF CONTENTS

ACKNOWLEDGEMENTS	A
SUMMARY	B
INTRODUCTION	1
CHAPTER 1	2
1. WHAT IS A DATA ACQUISITION SYSTEM	2
1.1. SINGLE CHANNEL SYSTEMS	2
1.2. MULTI-CHANNEL SYSTEMS	3
1.2.1. ANALOG MULTIPLEXING	3
1.2.2. PARALLEL CONVERSION SYSTEMS	4
CHAPTER 2	5
2. SAMPLING - THE BASICS	5
2.1. RULE	
SAMPLING THEOREM	5
2.2. ALIASING	8
2.3. ANALOG-TO-DIGITAL CONVERSION	8
2.3.1. BASIC I/O RELATIONSHIP	8
2.3.2. CONVERTER ERRORS	9
2.3.3. CONVERTER RESOLUTION	9
2.3.4. CONVERTER ACCURACY	9
2.3.5. CONVERSION TIME	9
2.3.5. CONVERTER THROUGHPUT RATE	11
CHAPTER 3	13
3. THE HARDWARE	13
3.1. THE PCL FAMILY OF CARDS	13
3.2. KEY FEATURES OF THE CARD	13
3.3. TECHNICAL SPECIFICATIONS	13
3.4. EXPANSION CAPABILITIES	14
3.5. CONNECTOR PIN ASSIGNMENT	15
3.6. INSTALLING THE HARDWARE	15
3.7. ANALOG SIGNAL CONNECTION	16
3.8. THE DESIGN OF THE HARDWARE	16
3.9. THROUGHPUT RATE CALCULATION	17
3.10. INTERFACING WITH THE IBM	20
CHAPTER 4	22
4. THE SOFTWARE	22
4.1. THE OBJECTIVES	22
4.2. THE PROGRAMMING LANGUAGE	22
4.3. THE PCL-711 REGISTER FORMAT	23
4.3.1. A/D DATA REGISTERS	23
4.3.2. MULTIPLEX SCAN RANGE	24
4.4. THE DRIVER ROUTINE	24
4.5. BEGIN SAMPLING PROCEDURE	25
4.5.1. SAMPLING IN SINGLE SHOOT MODE	26
4.5.2. SAMPLING IN TIMED MODE	27
4.6. INTERRUPTS	27
4.7. INTERRUPTS AND TURBO PASCAL - TIMED MODE	28
4.8. WHICH INTERRUPT?	30
4.9. PLOTTING THE SAMPLES	31
4.10. FOURIER ANALYSIS	31
4.10.1. PRINCIPLE OF FOURIER TRANSFORM	31
4.11. WRAPPING IT ALL TOGETHER	33
CHAPTER 5	34

5.USER'S GUIDE	34
5.1.HARDWARE REQUIREMENTS	34
5.2.INSTALLATION	34
5.3.STARTING THE PROGRAM	34
5.4.OPTION 1 SAMPLING	36
5.5.OPTION 2 PLOTTING THE DATA	37
5.6.FOURIER ANALYSIS	38
5.7.ERRORS	40
REFERENCES	42
APPENDIX	44 -
