SUMMARY

DVD Online Rental System
George Kokonis

This is the final year project required to accomplish gaining the HTI diploma in Computer Studies. This project is pioneer and I believe that it will be used extensively. It will be a convenient way for everybody to rent movies while they are sitting on their computers. With the help of my supervisor I managed to reach the development of the system and I was able to meet the expected requirements.

INTRODUCTION

In the decade that people reached now almost everything is done with the help of the computers and mostly the Internet. Many companies created web sites on internet that you are capable of buying something that you want online instead of going to the store. These are ways that make peoples life more convenient and luxurious. Still many video clubs are left behind and they work in industry with old fashioned way.

The system that will be developed is for Online DVD renting that will have many features that not a common DVD store has.
