

**DESIGN FEATURES OF
AGRICULTURAL MACHINERY**

by

Nicos Chr. Motites

Project Report

Submitted to

the Department of Mechanical Engineering

of the Higher Technical Institute

Nicosia Cyprus

in partial fulfillment of the requirements

for the diploma of

TECHNICIAN ENGINEER

in

MECHANICAL ENGINEERING

June 1993

Project Supervisor: Dr. Panayiotis Tramountanellis

ABSTRACT

The project is an investigation into the design, constructional and operational features of the various systems and methods used with main agricultural machinery for assisting the farmers with different operations.

Each system and method is described with reference to drawings and photographs to state the above features.
