

**DESIGN AND IMPLEMENTATION OF FLEXIBLE ASSEMBLY
SYSTEM
FOR A ROBOT ARM**

**Project Report Submitted by
SAWIDES SAWAS**

**Project Report submitted to the
Mechanical Engineering Department
of the Higher Technical Institute
Nicosia, Cyprus**

**in partial fulfilment of the requirements
for the diploma of
Technical Engineer**

in

MECHANICAL ENGINEERING

Supervisor: Dr. A. Stassis

JUNE 1993

ACKNOWLEDGEMENTS

Before proceeding with the presentation of my work I would like to express my sincere thanks to all persons that in any way contributed to the completion of the project.

To my project supervisor Dr. A. Stassis for all his help.

To Costas Hoplaros, Christos Theocharides, Marios Nicolaou and Maria Hadjioanou for the information provided.

Finally to all persons at the production lab and mechanical engineering workshops for their valuable cooperation.

Summary

- 1) Familiarization with the robot Arm Alpha II+ its main components, the teach control and the work envelope.
- 2) Familiarization of the existing program and its organization.
- 3) Familiarization with the programming methods for movement programs and the cartesian coordinates of the work envelope.
- 4) Design and Construction of the assembly table.
- 5) Design and Construction of the assembly components.
- 6) Add the subroutine for running any program.
- 7) Add the facility of automatic homing when main program run.
- 8) Design and Write the movement programs for the store and the assembly operations according to the robot work envelope.
- 9) Design and Write the Logic of the system in order to work when components came in random order.
- 10) Design and write the subroutine to get input from the sensor and according to that dimension, give to logic an input of what component pass.

CONTENTS

ACKNOWLEDGEMENTS

CHAPTER 1: INTRODUCTION

CHAPTER 2: ROBOTS (An overview)

2.1: Define Robots

2.2: Why Robots are Used

2.2.1: Robots advantages

2.2.2: Robots are used:

CHAPTER 3: Robot Classification by Geometric Configuration and work envelope

3.1 Cartesian

3.2 Cylindrical

3.3 Polar

3.4 Jointed-arm horizontal axis

3.5 Jointed-arm Vertical axis

3.6 Pendulum arm

3.7 Multiple-joint arm

CHAPTER 4: Classification by the Power they Used

4.1 Electric

4.2 Hydraulic

4.3 Pneumatic

CHAPTER 5: Robot classification by the programming method

5.1 On Line programming

5.1.1 The "Lead through" method

5.1.2 Teach by pendant

5.1.3 Teach using a P.C.

5.2 Off-Line programming

CHAPTER 6: Robots in Assembly Operations

6.1 Mechanical Assembly

6.2 Electromechanical Assembly

6.3 Electronics Assembly

CHAPTER 7: Sensors

7.1 Contact Sensors

7.2 Noncontact Sensors

CHAPTER 8: Flexible Assembly Hardware

CHAPTER 9: Software of the System

9.1 Software development

9.2 Running the program

9.3 Movement programs

CHAPTER 10: Conclusions
