INTRODUCTION

Cyprus Tourism Organization (C.T.O.) is a semi-government organization whose major scope is to promote Cyprus abroad and provide as well as possible tourist services in order to increase the economy of Cyprus. In the fields of this scope the C.T.O wants to open a library for better service of the employees of the organization, the public of the Cyprus, and any Tourism from abroad. Until now the organization has a manual system with many problems and without any control.

The objective of the project is to computerize the manual Library System of the Cyprus Tourism Organization. This system will be designed to eliminate the various problems and difficulties facing with the manual system.

The system will be able to control all the daily activities of the library keeping information about the materials, the borrowers (Employees, Outsiders), the suppliers and the orders.

In addition , the system should be able to continue normal operation and be able to cope with the growth of the Library. So, the major objective of the project is to try and produce a system which will provide efficiency up to the point possible.
