

MANUFACTURING OF COMPONENTS  
ON A CNC LATHE

Project Report  
submitted to  
the Department of Mechanical Engineering  
of the Higher Technical Institute  
Nicosia, Cyprus  
in partial fulfillment of the requirements  
for the diploma of

TECHNICIAN ENGINEER  
in  
MECHANICAL ENGINEERING

Project Supervisor: Dr Lazaris Lazari

JUNE 1991

## S U M M A R Y

---

This project deals with the Programming and Manufacturing of a bolt assembly on a CNC lathe.

The main objectives of this project are:

Part Programming of each component

Design of the components, including canned cycles

Manufacture of the component

Preparation of cost analysis

Summary

CHAPTER 1:

1.1	General	1
1.2	Importance of CNC technology	1
1.3	Historical review	2
1.4	Differences from other working machines	3
1.5	Comparing industrial and educational tool- machines CNC	3
1.6	Uses of CNC lathe	5

CHAPTER 2:

2.1	General	6
2.2	Advantages of CNC Lathe	6
2.3	Disadvantages of CNC Lathe	6

CHAPTER 3: Description and Operation of CNC Lathe

3.1	Main elements	8
3.2	Modification of Front Panel	23
3.3	Selection of Transmissions Steps on Compact 5 CNC	101
3.4	Tools	103
3.5	M-Codes	116

3.6	Program Input - Operation	124
3.7	Operating Elements CNC - Operation	125
3.8	Program Input	133
3.9	The program Sequence	137
3.10	Testrun	138
3.11	Interventions during Program Flow	143
3.12	Magnetic Tape Operation	147

#### CHAPTER 4:

1	First Component	150
2	Second Component	156
3	Individual Parts of Bolt Assembly	162
4	Bolt Assembly	163

#### CHAPTER 5:

Economic Analysis for Computer Numerical Control Machines (CNC)	164
