

DESIGN OF A PASSENGER HYDRAULIC LIFT

by

Sofroniou Michalakis

Project Report

Submitted to

the Department of Mechanical Engineering

of the Higher Technical Institute

Nicosia Cyprus

in partial fulfillment of the requirements

for the diploma of

TECHNICIAN ENGINEER

in

MECHANICAL ENGINEERING

June 1995

ACKNOWLEDGEMENTS

I would like to thank and express my appreciation to Mr N. Papanastasiou, Lecturer at the Higher Technical Institute for his assistance and guidance throughout the design procedure.

I would also like to thank Mr A. Christoforou, Manager of S.A.A.P. Company (install all types of elevators), for the provision of useful information relevant to the subject of the diploma project.

Finally I would like to thank my girl-friend Elena who has typed the diploma project.

SUMMARY

This project deals with the design of a hydraulic lift. The lift should be of adequate capacity for four persons, a speed of 0.52 m/s and is to be used for a mult, storey building. The number of stops are three.

CHAPTER 1, refer to the history of the elevator, from the first until the last modern model of elevator in nowadays.

CHAPTER 2, refers to the two types of elevator.

CHAPTER 3, refers to the elevator traffic, (doors, platform shape, and buffer), with the design and some calculations.

CHAPTER 4, refers to the guides, the material property and the selection of them and some calculations of fixing bracket of guides.

CHAPTER 5, refers to the grade of service, explanation of Round Trip Time and calculation of the it.

CHAPTER 6, refers to the design of Uprights and Shelves, design of Shoes and calculation of the stress and selection parts for these designs.

CHAPTER 7, refers to the modern Hydraulic types, especially to the power unit and the parts which the power unit consists.

CHAPTER 8, refers to the calculation sheet, calculation determination and selections of the designed elevator.

CHAPTER 9, refers to the price which cost this designed hydraulic elevator.

CONTENT

CHAPTER 1.

1. Introduction 1

CHAPTER 2.

2. Types of elevator..... 4
- 2.1. Hydraulic elevator 4
(direct, Indirect, Holeless).
- 2.3 Tractor elevator 9

CHAPTER 3.

3. Elevator traffic 12
- 3.1 Types of doors 12
- 3.2 Door operation 14
- 3.3 Elevator platform shape 15
- 3.4 Design of a platform shape 16
- 3.5 Buffers 26
- 3.5.1 Selection of the Buffer 27
- 3.5.2 Calculation of Buffer loads 28

CHAPTER 4.

4. Guides 30
- 4.1 Material 30
- 4.2 Sizes 30
- 4.3 Guide stresses 32
- 4.4 Fixing and jointing 32
- 4.5 Guide lubrication 34
- 4.6 Selection of the guides 35
- 4.7 Fixing bracket 36
- 4.7.1 B.M.D. and S.F.D. 37

CHAPTER 5.

5. Grade of service 40
- 5.1 Round Trip Time 40
- 5.2 Probable number of stops 40
- 5.2.1 Calculation probable number of stops 41

5.3	Time for passenger to enter the car	42
5.3.1	Time for passenger to leave the car	43
5.4	Calculation of R.T.T.	43

CHAPTER 6.

6.	Design of Uprights and Shelves	46
6.1	Calculation of the bolt diameter	46
6.1.2	Stresses	49
6.2	Design of a Shoe	50
6.2.1	Selection of the bolts	51
6.2.2	Stresses	52

CHAPTER 7.

7.	Modern Hydraulic Types	53
7.1	Cylinder and plunger designs	55
7.2	Starting and Stopping	57
7.3	Down operation	58
7.4	Pumps	58

CHAPTER 8.

8.	Calculation sheet	59
8.1	Calculation of the piston ram	60
8.2	Buckling factor	60
8.3	Piston ram weight	60
8.4	Static pressure	61
8.5	Theoretical static pressure	61
8.6	Pump selection	63
8.7	Tank selection	63
8.8	Motor selection	64
8.9	Conclusion	64

CHAPTER 9.

9.	Cost Analysis	67
----	---------------------	----

CHAPTER 10.

10.	Drawings	68
-----	----------------	----
