

**ENVIRONMENTAL IMPACT OF
CONCRETE STRUCTURES**

by

YIAVRIS STAVROS

Project Report

Submitted to

the Department of Civil Engineering

of the Higher Technical Institute

Nicosia Cyprus

in partial fulfillment of the requirements

for the diploma of

TECHNICIAN ENGINEER

in

CIVIL ENGINEERING

June 1993

ACKNOWLEDGMENTS

I would like to express my deepest appreciation to those who in any way contributed to the completion of this project.

First I would like to thank my project supervisor Mr. N. Kathijotes for his help.

Secondly I thank Mr. Christoforos Theodoulides of the town planning authority for this help.

SUMMARY

This project analyses the problems arising from concrete use. The destruction of Cyprus heritage, coasts and mountains; basically, from the aesthetic point of view; since the use of concrete is endless and continues to expand at an accelerated rate.

The whole project analyses

- * Concrete composition and properties, why is it preferred and problems arising, causes and solutions.
- * Use of visual concrete.
- * Combination of concrete with other materials.
- * Typification (good and bad use).
- * Large volume buildings.
- * Destruction and Restoration of old character.
- * Coasts of Cyprus.
- * Mountains of Cyprus.
- * Churches of Cyprus.
- * Town planning regulations.

If concrete is used correctly then the environment is not destroyed but decorated.
