MULTIUSER BUSINESS MANAGEMENT GAME

Project Number : CS/118

Project report submited by: Sotiris R. Stylianou

In partial fulfillment of the requirements for award for the diploma in computer studies of the Higher Technical Institute, Nicosia-Cyprus

Project supervisor: Mr Panicos Masouras
Bsc in Computer Science,
MBCS, MCCS
Lecturer,
Computer studies department
HTI

External Assessor: Mr Yiannos Aletraris
Msc, Bsc Computer Science
University of Manchester
MBCS, MCCS, MIEE
Systems Analyst
Popular Bank

JUNE 1994

1. Foreword

Management Games are used widely in universities as a teaching aid. They can also be used for leisure. This game is an investments management game that is played on a Novell network by two to ten players, and is managed by a game administrator. This is the administrators manual, the first of two manuals for this game. It explains the operation of the game and the designing of sessions since you may design your own sessions.

The Administrator of the MBMG is considered to be a computer oriented person with previous experience with computers and some knowledge of MS-DOS. Also it would be helpful to read the Players manual first, in order to know what the game is about.
