6.3.7 Active Users Form 6-6
6.4 Reports 6-7
6.4.1 System Reports 6-7
6.4.2 Operation Reports 6-7

A. Getting Started

A-1 Introduction

CYBER Kids Intranet Zone is an Intranet system developed to handle the main operations of CYBER Kids Institutes. Since CYBER Kids is a multinational organization, a system able to connect all CYBER branches in both operation and education terms were needed. An innovative solution to their need was the Intranet that our team developed.

The system has been developed using Hypertext and Active Server Pages (ASP) scripting; running on a Microsoft Windows NT 4.0 server software.

A-2 About this manual

This manual is a thorough guide for the Server, Client setup and the Cyber Kids Intranet Zone; provided for the System Administrator, Branch Directors, registered Students and simple users searching for information concerning Cyber Kids Institutes.

All screens have been captured, entered in this manual and sparingly commented so that the setup task of the Intranet on a new Server and the setup of Clients would be a "piece of cake".

The manual is divided into six sections. These are:

1. **Server and Client Configuration Section.**
   The server and client requirement and configuration are being displayed.
2. **All Users Section.**
   This section can be accessed by anyone browsing the Cyber Kids server.
3. **News and FAQ Section.**
   This section is divided into subsections. The first one, the one residing under the Cyber Kids IntraNet Zone, can be only used by authorized users. The second, the News and FAQ reports, can be viewed by anyone
4. **E-Mail Center Section.**
   This section can be used only Cyber Kids students and authorized Cyber Kids users.
5. **Branch Directors Section.**
   This section is to be used by Branch Directors.
6. **Administrators Section.**
   Only users having administrative rights can use this section. The system Administrators can access and use the whole system.
