PROJECT NO. 3313

SUMMARY

This is a project concerning the main functions of multi-branched Copy Center. It is a database management information system and it's purpose is to help the employees perform their main work easily and effectively.

Modules that have been developed cover the needs of the sales activities of the Copy Center. This needs involve the handling of the personal information of the customers, the orders placed by them, their quick sales, the services provided by all branches and the headquarter, receipts and invoices issued. In addition information about each branch and its employees are kept. Finally an efficient and effectively way about keeping track of orders status is put into action.

Moreover, besides the needs of the Copy Center, PC's PrintWays Information System provides the general manager and all the other users with reports that are helpful for their work.
