TECHNICIAN ENGINEER*

in

CIVIL ENGINEERING

June 1994

ACKNOWLEDGEMENTS

It is a great pleasure to me to be offered the opportunity to express my sincere thanks to all those who have, in any way, contribute to the completion and presentation of this project.

Firstly I would like to express my sincere thanks to Mr. Andreas Kkolos, supervisor of my project, lecturer in Civil Engineering Department at the Higher Technical Institute, for his advice and guidance through the whole study of this project.

I would also like to thank Messrs Athos Olumbios and Aristos Cacoutas for the valuable information they gave me.

Special Thanks to Mr Phedias Eleftheriades for his kind acceptance to examine this project.

Further I would like to thank Mrs Maria Philokyprou for carrying out the typing and binding of this project.

INTRODUCTION

The main object of this project is to show you how can be prepared a Bill of Quantities of quantities by using the traditional method and the SMM7. A quite good project including basement, ground floor and first floor was chosen for preparing the Bill of Quantities.

Finally I have made some research to compare the methods of taking off in Cyprus with those of SMM7.
