COMPUTER STUDIES COURSE

DIPLOMA PROJECT

GENERALIZED SOFTWARE PACKAGE
FOR ANALYSIS OF PRODUCT SALES
AND SALESPERSONS' PERFORMANCE

CS/027

PAVLOU EVSEVIA

1990

1. INVESTIGATION PHASE

1.1 DEFINE THE PROBLEM

This project deals with the design and implement of a generalized software package for analysis of product sales and salespersons' performance.

The system should be general enough so as to be used by any company involved with sales and employing a team of salespersons. All the products of the company should be coded and numbers should be assigned to all salespersons.

The system should provide the facility of adding new products, delete and modify a product and salesperson entries and also add a new salesperson record, modify the record, delete a salesperson's record if a salesperson leave the company or keep the information of that salesperson's record to provide a comparison of the salesperson with that of their successor.

The system should also generate, at a minimum the following reports.

1. Sales per product per salesperson
2. Sales per product per area
3. Sales per product per salesperson per month
4. Sales per product/product group
5. Sales per product/product group per month
6. Sales per product group per salesperson
7. Sales per salesperson per month
8. Sales per salesperson per product group per month

The method used for collecting information about existing procedures used in companies involved with sales and employing a team of salesperson was interviews.

A salesperson, Mr. E Stylianou, was interviewed. Mr. Stylianou is working at Lambrianides Bro Lmd. This company sells meat products in all cities in Cyprus and employs a team of salespersons. The salespersons are responsible of going around the groceries and supermarkets at a given area and sell the products.

Depending on the quantity of products they sell, salespersons get their commission.

PHASE / ACTIVITY	PAGE
THE INVESTIGATION PHASE	
1. INITIAL INVESTIGATION	1
1.1 Define the problem	1
1.2 Describe existing procedures	3
1.3 Generate possible solution	4
1.4 Reasons the project undertaken	6
2. FEASIBILITY STUDY	7
2.1 Brief description of existing system ..	7
2.2 Anticipated changes and expected results	7
2.3 Feasibility Study Considerations	8
2.3.1 Operational feasibility	8
2.3.2 Technical feasibility	9
2.3.3 Schedule feasibility	9
2.3.4 Financial feasibility	10
ANALYSIS AND GENERAL DESIGN PHASE	
3. EXISTING SYSTEM REVIEW	11
3.1 Introduction	11
3.2 Data Stores/Input/Outputs	11
3.2.1 Data stores	11
3.2.2 Input	11

3.2.3	Output	11
3.2.4	Current system deficiencies	11
4.	NEW SYSTEM REQUIREMENTS.....	12
4.1	Introduction	12
4.2	User specification document	12
4.2.1	Overview Narratives	12
4.2.2	System function	14
4.2.3	Input to the system	15
4.2.3.1	Input design	15
4.2.3.2	Input equipment	15
4.2.3.3	Design of document.....	16
4.2.4	Outputs to the users	17
4.2.4.1	Output design	17
4.2.4.2	Evaluation criteria	18
4.2.4.3	Media and device.....	20
4.2.4.4	Output form design	20
4.2.5	User Interfaces with the system	21
4.2.6	Logical data analysis	22
5.	NEW SYSTEM DESIGN	25
5.1	Introduction	25
5.2	File design	25
5.2.1	File organization and access	25
5.2.2	File equipment and media	26
5.2.3	File designs trade offs	26
5.3	Control and reliability design	28
6.	IMPLEMENTATION AND INSTALLATION PHASE	29
6.1	Preliminary detail design	29
6.2	Preliminary system test plan	30

6.3 Preliminary installation plan	30
6.4 User training outline	30
6.5 Hardware and software plan	30

DETAILED DESIGN AND IMPLEMENTATION PHASE

7. TECHNICAL DESIGN	32
7.1 Detail design specification	32
7.2 Computers operation documentation	32
8. TEST SPECIFICATION AND PLANNING	33
9. CONCLUSIONS	34
10. FUTURE EXPANDIBILITY OF THE SYSTEM	35
