MANUFACTURE OF COMPONENTS ON CNC LATHE

by

PARASKEVAS PARASKEVA

Project Report
Submitted to

the Department of Mechanical Engineering
of the Higher Technical Institute
Nicosia Cyprus

in partial fulfillment of the requirements

for the diploma of TECHNICIAN ENGINEER

in

MECHANICAL ENGINEERING

June 1991

Project Supervisor: Dr L.G. Lazari

ACKNOWLEDGMENTS

I would like to express my appreciation to Dr. L.G. Lazari, lecturer in the Mechanical Engineering Department of the Higher Technical Institute, for his valuable contribution and guidance during the preparation of this project.

Paraskevas Paraskeva 3rd year student in Mechanical Engineering H.T.I.

ABSTRACT

This project deals with the Manufacturing of wooden components on a CNC lathe.

First, the basic theory of the project was prepared with CNC technology, following a general study of EMCO COMPACT 5 CNC with its operating elements. Coordinate system, programming and program input characteristics. Also the tape preparation alarm signs, type of interpolation, canned cycles and subroutines are described as well as the working data and Tooling System. This project was extended to a brief description of programming languages Tool monitoring and CNC future in the industry.

The main part of this project is the part programming for the manufacture of wooden components of these components which involves two excersices, followed by the manufacture of these components from a wooden bar.

Finally, a cost analysis is prepared and some conclusions relatives to the work carried out in this project.

Abstract	
Contents	A.
Introduction	
CHAPTER 1: History of Numerical Control	
1.1. Definition of Numerical Control	1
1.2. Historical Background	1
1.3. Advantages of NC compared to	2
Conventional Manual Method of Production	
1.4. Problems with Conventional NC.	5
CHAPTER 2: Computer Numerical Control	
2.1. Definition of CNC	7
2.2. Features of CNC	7
2.3. Advantages of CNC	11
CHAPTER 3: Applications of CNC or NC systems	13
CHAPTER 4: Characteristics features of EMCO	
COMPACT 5 CNC.	
4.1. Introduction	15
4.2. Main Elements of EMCO COMPACT 5 CNC	15
CHAPTER 5: Programming of EMCO COMPACT 5 CNC	
5.1. Simple Programming definition	20
5.2. CNC Coordinate System	20
5.2.1. Incremental System	21
5.2.2. Absolute System	21
5.3. Part Programming	
5.3.1. Introducing	21
5.3.2. Manual Port Programming	22
5.3.3. Computer - Assisted Part Programming	22
5.4. Programming Data	
5.4.1. CNC words	24
5.4.2. Feed and Speeds	24
5.4.3. Canned Cycles and Subroutines	26

	5.4.4. Alarm signs	26
5.5.	CNC Programming	
	5.5.1. Introduction	29
	5.5.2. Point-to-Point Positioning	29
	5.5.3. Continuous Path	, 29
	5.5.4. Manuscript	30
5.6	Operating Elements of CNC-operation	33
5.7.	Programming input operation	
	5.7.1. Figure keys of program input	36
	5.7.2. Program input procedure	37
	5.7.3. Testrun.	37
	·	
CHAPTER 6:	Part Programming Languages.	38
CIIADEED 7.	Cutting Tools	
	Cutting Tool Care and Use	41
	Tool Management Program	43
	-	
7.3.	Tool Monitoring.	45
CHAPTER 8:	Numerical Control and The Future	
8.1.	Introduction	46
8.2.	Programming Automation	46
8.3.	NC and CAM in the future.	47
CHAPTER 9.	Program of Wooden Components	
	Component N°1	50
J	9.1.1. Calculations	30.
	9.1.2. Program	
9.2	Component N°2	62
J. 2	9.2.1. Calculations	02
	9.2.2. Program	
	J.Z.Z. IIOgiam	
CHAPTER 10): Costing.	81
		J .
CHAPTER 11	: Conclusions.	83
