Introduction

In the 21st Century new trends have been raised for communication and information gathering such as the e-learning which nowadays has become one of the most important techniques for education and training purposes.

So, an electronic web-based multimedia tour guide for Cyprus that is accessible through the Internet can provide general information about Cyprus. The tour guide is for educational purposes, for anyone that wants information about Cyprus, but mainly for tourists that want to travel and spend their time in Cyprus as they can gather information about places that they can visit such museums, camping places, parks, churches, hotels, etc. Through the electronic maps the user is able to find a place to visit and how to get there.

Finally because the project is a web-based a lot of users will have the chance to visit the website and gather a lot of information. This is going to be an advantage for Cyprus since it can be used as a promotion tool, as a lot of people around the world would be able to see that information.
