INTRODUCTION

The " **Software package for Histopathology Specimens**" requires the development of computerized systems for the needs of Neuropathology and Immunohistology sections of the Histopathology Department of the Cyprus Institute of Neurology and Genetics (CING).

The main purpose of Neuropathology Lab is to perform **Muscle Biopsies**. The histological and histochemical tests are carried out on the muscle sections in order to clarify microscopically the overall architecture and histochemistry of the muscle fibres. So for the diagnosis of the various neuromuscular diseases many parameters are taken into consideration i.e muscle fibre size (hypertrophic or atrophic), shape (angulated,round), presence of fibrofatty tissue in the endomysium, cell infiltration, phagocytosis, necrosis, architectural changes such as fibre type distribution. A form with these parameters is filled after the study of the muscle fibre by the referring doctor. This form is then sent to the department of Artificial Intelligence for further diagnosis.

There are more than two hundred cases of breast cancer in Cyprus, every year. It is important that the tissues from these patients be assessed for a number of prognostic factors, including oestrogen and progesterone receptors. The information from these investigations enables the oncologist to formulate the mode of treatment and to predict the survival rates of these patients.

This work is carried out in the **Immunohistology** laboratory which is associated with the Histology department of the Nicosia General Hospital. Usually one of the problems that has to be assessed in surgical specimens is the question

of "is there a tumour present or not?" This is carried out by a histopathologist who examines sections of the specimen with a microscope. The Immunohistology laboratory has established the immunohistochemical methods for assessing oestrogen and progesterone receptors in carcinoma of the breast.

The purpose of the project is to identify the problems and needs of the existing system and develop a computer aided system, for the two sections. The system will be user friendly, efficient and give fast response. All manual procedures will be replaced into computerized operations. User needs will be fulfilled and results will be prepared in much less time.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS

INTRODUCTION.....	1
-------------------	---

1. INITIAL INVESTIGATION PHASE

1.1 ACTIVITY 1: INITIAL INVESTIGATION

1.1.1	Introduction.....	3
1.1.2	User Request.....	3
1.1.3	Gathering Information Methods.....	4
1.1.4	Systems Objectives Statements.....	5
1.1.5	Existing Procedures Description.....	5
	1.1.5.1 Muscle Biopsy.....	5
	1.1.5.2 Biopsy Report.....	6
	1.1.5.3 Breast Cancer List of Preserved Tissues.....	6
	1.1.5.4 Breast Cancer Prognostic Criteria.....	6
1.1.6	Manual Data Files.....	7
1.1.7	Problems with the Existing System.....	7
1.1.8	Systems Possible Solutions.....	7
1.1.9	Recommended Solution.....	8
1.1.10	Result of Initial Investigation Activity.....	8

1.1 ACTIVITY 2: FEASIBILITY STUDY

1.2.1	Introduction.....	9
1.2.2	Schedule Feasibility.....	9
1.2.3	Operational Feasibility.....	10
1.2.4	Human Factors Feasibility.....	10
1.2.5	Technical Feasibility.....	10
1.2.6	Benefit of the New System.....	11
1.2.7	Conclusion of Feasibility Study.....	12

2. ANALYSIS AND GENERAL DESIGN PHASE

2.1 ACTIVITY 3: EXISTING SYSTEM REVIEW

- 2.1.1 Introduction..... 13
- 2.1.2 Existing Procedures..... 14
- 2.1.3 Data Files..... 14
- 2.1.4 Current System Inputs..... 15
- 2.1.5 Current System Outputs..... 16

2.2 ACTIVITY 4: NEW SYSTEM REQUIREMENTS

- 2.2.1 Introduction..... 17
- 2.2.2 User Specification Document..... 17
 - 2.2.2.1 Overview Narrative..... 17
 - 2.2.2.2 System Function..... 17
 - 2.2.2.3 Processing..... 18
 - 2.2.2.4 Outputs for the user..... 18
 - 2.2.2.5 Inputs to the system..... 18
 - 2.2.2.6 User Interface with the system..... 19

2.3 ACTIVITY 5: NEW SYSTEM DESIGN

- 2.3.1 Introduction..... 20
- 2.3.2 New System Desing Specification..... 20
 - 2.3.2.1 Processing..... 20
 - 2.3.2.2 Inputs to the system..... 21
 - 2.3.2.3 Output to the user..... 21
 - 2.3.2.4 Data Files..... 21
 - 2.3.2.5 Performance Criteria..... 23
 - 2.3.2.6 Access Control..... 23
 - 2.3.2.7 Security..... 24

2.4 ACTIVITY 6: IMPLEMENTATION AND INSTALLATION
PLANNING

- 2.4.1 Introduction..... 25
- 2.4.2 Preliminary Implementation and Test Plan..... 25
- 2.4.3 Preliminary System Test Plan..... 26
- 2.4.4 User Training Outline..... 26
- 2.4.5 Preliminary Installation Plan..... 26

3.	DETAILED DESIGN AND IMPLEMENTATION PHASE	
3.1	ACTIVITY 7: TECHNICAL DESIGN	
3.1.1	Introduction.....	28
3.1.2	Detailed Design Specification.....	28
3.3.2.1	Human Machine Interface.....	28
3.1.2.2	Application Software Design...	29
3.2	ACTIVITY 8: TEST SPECIFICATION AND PLANNING...	30
3.3	ACTIVITY 9: PROGRAMMING AND TESTING.....	33
3.4	ACTIVITY 10: USER TRAINING.....	34
3.5	ACTIVITY 11: SYSTEM TEST.....	35
4.	INSTALLATION PHASE	
4.1	ACTIVITY 12: FILE CONVERSION.....	36
4.2	ACTIVITY 13: SYSTEM INSTALLATION.....	37
5.	REVIEW PHASE	
5.1	ACTIVITY 14: DEVELOPMENT RECAP.....	38
5.2	ACTIVITY 15: POST IMPLEMENTATION REVIEW.....	39
5.2.1	General Reveiw of the New System.....	39
5.2.2	Future System Enhancements.....	39
5.2.3	Investigation for computer Aided Diagnosis.....	40
