HIGHER TECHNICAL INSTITUTE	PROJECT NO. 3252
----------------------------------	---------------------

Summary

Since people have been organized in societies, they started to invent various ways to communicate with each other. This method of communication has developed rapidly the last decades. In our days the most popular ways for people to communicate is via mobile phones and the Internet.

In this project an effort has been made to present one of the programs people use in the Internet to communicate with each other, called NetMeeting. The way to present it, of course, is via a web site that illustrates the various features of NetMeeting.

This web site has been constructed with the aid of a web-designing program, the Dreamweaver. Moreover, the guide for Dreamweaver is an aid for those who wish to get familiarized with this software, and from this aspect it has proved to be, I might say, very useful and informative for me.

In the following pages you will find a practical guide to the use of Dreamweaver 4.0. I will explain the functions of all the web tools that I have used while developing a web site. Most of them have been used, but not implemented by web site the NetMeeting. At the end of this guide I will present the contents of the web site, which describe briefly the features of the NetMeeting.
