CHAPTER 1

INTRODUCTION

The purpose of this project is to design the electrical installation of a leather factory. An electrical installation includes illumination and lighting calculations, socket outlet and fixed appliances load calculations, machine load calculations, telephone installation and fire and burglar alarm. All the above are divided into chapters and are examined carefully based on the 16th edition of IEE Regulations.

A brief explanation of the chapters is showed below.

CHAPTER 2

It deals with the illumination calculation and with the lighting load calculations.

CHAPTER 3

It includes socket outlet load calculations.

CHAPTER 4

It deals with the fixed appliance loads that are in the factory.

CHAPTER 5

It includes machine load calculations.

CHAPTER 6

It deals with the telephone installation of the factory.

CHAPTER 7

It deals with the distribution board ratings and the cables used.

CHAPTER 8

It includes the fault level calculations of the factory.

CHAPTER 9

It includes the power factor correction calculations.

CHAPTER 10

It deals with the fire alarm system.

CHAPTER 11

It deals with the burglar alarm system.

CHAPTER 12

It deals the costing of the installation that includes material and labour cost.

CHAPTER 13

Conclusions.

CONTENTS

	Page
CHAPTER 1: INTRODUCTION	1
CHAPTER 2: LIGHTING	
Introduction	3
Units and Definitions	3
Glare and Stroboscopic effect	6
Basic Requirements for Good Illumination	6
Choice of Lighting Source	7
Lumens Method Of Design	8
Illumination Calculations	9
Light Load Calculations	13
Table for the Load Calculations	29
CHAPTER 3: SOCKET OUTLETS	
Introduction	30
Socket Outlet Calculations	31
Table for Socket Outlet Calculation Results	38
CHAPTER 4: FIXED APPLIANCES	
Cooker Unit	39
Water Heater	42
Air Conditioning Units	45

Table for the Fixed Appliance Loads	48
--	-----------

CHAPTER 5: MACHINES

Introduction	49
Machine Circuits	50
Table for Machine Loads	56

CHAPTER 6: TELEPHONE INSTALLATION

Definitions of the terms used	57
Methods of Connection	59
Joint-pits	59
Telephone System T16	60
Telephone Installation Design	60
Wiring Schematics	62

CHAPTER 7: DISTRIBUTION BOARDS AND SUPPLY CABLES

Introduction	63
Load Distribution to D/B 1	64
Load Distribution to D/B 1A & Supply Cables	66
Load Distribution to D/B 1B & Supply Cables	68
Load Distribution to D/B 2 & Supply Cables	69
Load Distribution to D/B 2A & Supply Cables	71
Load Distribution to D/B 2B & Supply Cables	72
Main Distribution Board & Supply Cables	74

CHAPTER 8: FAULT LEVEL CALCULATIONS

Introduction	76
Calculations	77

CHAPTER 9: POWER FACTOR CORRECTION

Introduction	81
Design Procedure	82
Actual Design	83

CHAPTER 10: FIRE ALARM SYSTEM

Introduction	84
Types of System	84
Zoning	85
Types of Detectors	85
Heat Detectors	86
Smoke Detectors	86
Flame Detectors	87
Choice of Detectors	87
Spacing of Smoke and Heat Detectors	87
Control Panel	88
Routine Testing of the System	89
General Characteristics of the Installation	89
Schematic Diagram	91
Table for the Fire Alarm System	91

CHAPTER 11: INTRUDER SYSTEM

Introduction	93
Control Panel	93
Detectors	93
System Maintenance	95
General Installation	95

CHAPTER 12: COSTING

Introduction	96
Material Cost and Labour Cost	97

CHAPTER 13: CONCLUSIONS

Conclusions	101
